

$\Delta\theta$  cut is configurable  
up to  $\pm 15$  mrad.

Per each value of RA there is a  
range of valid RB values.  
Each range is divided into 31 sub-  
ranges when every sun-range  
represents an angle in mrad, from  
-15 to 15 (saved in LUT). RB values  
that are out of valid range are  
irrelevant.
